Section 1. Identification

Identification of the product

Product name: Divalproex Sodium Sprinkle Capsules

Formula: \((\text{C}_{16}\text{H}_{31}\text{NaO}_4)_n\)

Chemical Name: Sodium hydrogen bis (2-propylpentanoate)

Manufacturer / supplier identification

Company: Cadila Healthcare Ltd. Ahmedabad, India

Contact for information: Tel.: +91 79 6868100 Fax: +91 79 3750319

Emergency Telephone No. Tel.: +91 79 6868100

Recommended use / Therapeutic Category

Monotherapy and adjunctive therapy of complex partial seizures and simple and complex absence seizures; adjunctive therapy in patients with multiple seizure types that include absence seizures.
Restriction on Use / Contraindications: Divalproex sodium sprinkle capsules should not be administered to patients with hepatic disease or significant hepatic dysfunction. Multi-organ hypersensitivity reactions have been rarely reported in close temporal association to the initiation of valproate therapy in adult and pediatric patients. Urea cycle disorders.

Section 2. Hazard(s) Information

Dose and Administration
Start at 15 mg/kg/day, increasing at 1 week intervals by 5 to 10 mg/kg/day until seizure control or limiting side effects

Adverse Effects
Most common adverse reactions (reported >5%) are thrombocytopenia, nausea, somnolence, dizziness, vomiting, asthenia, abdominal pain, dyspepsia, diarrhea, increased appetite, tremor, weight gain, weight loss, alopecia, headache, fever, anorexia, constipation, diplopia, ambylopia/blurred vision, ataxia, nystagmus, emotional lability, thinking abnormal, amnesia, flu syndrome, infection, bronchitis, rhinitis, ecchymosis, peripheral edema, insomnia, nervousness, depression, pharyngitis, dyspnea, tinnitus.

Over Dose Effect
Over dosage with valproate may result in somnolence, heart block, and deep coma. Fatalities have been reported; however patients have recovered from valproate levels as high as 2120 mcg/mL.

Medical Conditions
• Hepatotoxicity; evaluate high risk populations and monitor serum liver tests
• Birth defects and decreased IQ following in utero exposure; only use to treat pregnant women with epilepsy if other medications are unacceptable; should not be administered to a woman of childbearing potential unless essential.
• Pancreatitis; divalproex sodium capsules (sprinkle) should ordinarily be discontinued.
• Suicidal behavior or ideation; Antiepileptic drugs, including divalproex sodium increase the risk of suicidal thoughts or behavior.
• Bleeding and other hematopoietic disorders; monitor platelet counts and coagulation tests.
• Hyperammonemia and hyperammonemic encephalopathy; measure ammonia level if unexplained lethargy and vomiting or changes in mental status.
• Hypothermia: Hypothermia has been reported during valproate therapy with or without associated hyperammonemia. This adverse reaction can also occur in patients using concomitant topiramate.
Safety Data Sheet
Divalproex Sodium Sprinkle Capsules

**Strength:** 125 mg  
125mg.  

**Pack Size:** 100 and 1000 Capsules per Bottles  
Pack Size: Blister pack of 100 unit dose  

**Revision No.:** 02

- Drug Reaction with Eosinophilia and Systemic Symptoms (DRESS)/Multiorgan hypersensitivity reaction; discontinue divalproex sodium sprinkle capsules.
- Somnolence in the elderly can occur. Divalproex sodium capsules (sprinkle) dosage should be increased slowly and with regular monitoring for fluid and nutritional intake.

**Contraindications**
Divalproex sodium sprinkle capsules should not be administered to patients with hepatic disease or significant hepatic dysfunction.

Multi-organ hypersensitivity reactions have been rarely reported in close temporal association to the initiation of valproate therapy in adult and pediatric patients.

Urea cycle disorders.

**Pregnancy Comments**
Use of divalproex sodium during pregnancy can cause congenital malformations including neural tube defects. If this drug is used during pregnancy, or if the patient becomes pregnant while taking this drug, the patient should be apprised of the potential hazard to the fetus. Divalproex sodium should be considered for women of childbearing potential only after the risks have been thoroughly discussed with the patient and weighed against the potential benefits of treatment.

**Pregnancy Category**
D

### Section 4. First-aid measures

**General**
Remove from exposure. Remove contaminated Clothing. Person developing serious hypersensitivity reaction must receive medical attention.

**Overdose Treatment**
In overdose situations, the fraction of drug not bound to protein is high and hemodialysis or tandem hemodialysis plus hemoperfusion may result in significant removal of drug. The benefit of gastric lavage or emesis will vary with the time since ingestion. General supportive measures should be applied with particular attention to the maintenance of adequate urinary output. Naloxone has been reported to reverse the CNS depressant effects.

</tbody>
</table>

**Fire Fighting Procedure**
As with all fires, evacuate personnel to a safe area. Fire fighter should use self-contained breathing equipment and protective clothing.

### Section 6. Accidental Release Measures

**Spill Response**
Wear approved respiratory protection, chemically compatible gloves and protective clothing. Wipe up spillage or collect spillage using high efficiency vacuum cleaner. Avoid breathing dust. Place spillage in appropriately labelled container for disposal. Wash spill site.

### Section 7. Handling and Storage

**Storage**
Store at 20° to 25°C (68° to 77°F). Dispense in a tight, light-resistant container.

**Incompatibilities:**  
No Data available.

---

### Section 8. Exposure controls / personal protection

**Respiratory Protection**  
Protection from inhalation is not normally necessary. If ventilation is inadequate or dust is likely to generate, use of suitable dust mask would be appropriate.

**Skin Protection**  
Skin protection is not normally necessary, however it is good practice to avoid contact with chemical to use suitable gloves when handling.

**Eye protection**  
Eye protection is not normally necessary. If concerned wear protective goggles or glasses. Wash hands prior to touching eye and in particular handling contact lenses.

**Protective Clothing**  
Protective clothing is not normally necessary, however it is good practice to use apron.

---

### Section 9. Physical and chemical properties

**Appearance**  
Divalproex Sodium Sprinkle Capsules (divalproex sodium coated particles in capsules), 125 mg are white to off-white free flowing pellets filled in size ‘0’ hard gelatin capsules with blue colored cap printed with “ZA66” in black ink and white body printed with “125mg” in black ink.

**Solubility in water**  
No Data Available.  

**Odour**  
Odourless

**Boiling point**  
No Data Available  

**Melting Point**  
No Data Available

**Evaporation rate**  
No Data Available  

**Vapour density**

**Specific gravity**  
No Data Available

**Vapour pressure**  
No Data Available

---

### Section 10. Stability and Reactivity

**Condition to avoid**  
Avoid exposure to extreme heat, light and moisture.  

**Stable**  
Stable under normal ambient and anticipated storage and handling conditions.

Hazardous Reaction: No data available.

Incompatibilities: No Data Available

Section 11. Toxicological information

General
Handling of formulated product is not expected to cause any toxicological affects. The data pertains to the ingredient in formulations, rather than this specie formulation.

Target organ
Eye contact, Skin contact and inhalation is not great risk as this product is tablet.

Other
Carcinogenesis, Mutagenesis, and Impairment of Fertility

Carcinogenesis
Valproate was administered orally to rats and mice at doses of 80 and 170 mg/kg/day (less than the maximum recommended human dose on a mg/m² basis) for two years. The primary findings were an increase in the incidence of subcutaneous fibrosarcomas in high dose male rats receiving valproate and a dose-related trend for benign pulmonary adenomas in male mice receiving valproate. The significance of these findings for humans is unknown.

Mutagenesis
Valproate was not mutagenic in an in vitro bacterial assay (Ames test), did not produce dominant lethal effects in mice, and did not increase chromosome aberration frequency in an in vivo cytogenetic study in rats. Increased frequencies of sister chromatid exchange (SCE) have been reported in a study of epileptic children taking valproate, but this association was not observed in another study conducted in adults. There is some evidence that increased SCE frequencies may be associated with epilepsy. The biological significance of an increase in SCE frequency is not known.

Fertility
Chronic toxicity studies of valproate in juvenile and adult rats and dogs demonstrated reduced spermatogenesis and testicular atrophy at oral doses of 400 mg/kg/day or greater in rats (approximately equivalent to or greater than the maximum recommended human dose (MRHD) on a mg/m² basis) and 150 mg/kg/day or greater in dogs (approximately 1.4 times the MRHD or greater on a mg/m² basis). Fertility studies in rats have shown no effect on fertility at oral doses of valproate up to 350 mg/kg/day (approximately equal to the MRHD on a mg/m² basis) for 60 days. The effect of valproate on testicular development and on sperm production and fertility in humans is unknown.
Section 12. Ecological information

Do not allow product to enter drinking water supplies, waste water or soil

Section 13. Disposal Consideration

Dispose the waste in accordance with all applicable Federal, State and local laws.

Section 14. Transport Information

The product is not hazardous when shipping via air (IATA), ground (DOT), or sea (IMDG).

Section 15. Regulatory Information

Generic Medicine. Approved by USFDA & the ANDA Number is 78919

Section 16. Other information

None

Date of issue: 28/05/2015  Supersedes edition of: 01
